Ph.D. Positions in Business for Society

University of Milano-Bicocca

3 fully-funded scholarships available

University of Milano-Bicocca seeks candidates for Ph.D. positions in Business for Society for the next cohort starting November 2022.

The Ph.D. program in Business for Society is a full-time 3 years integrated, multidisciplinary work and research program for those who are oriented towards making a significant contribution to the field of strategic management, innovation, sustainability and social responsibility.

Our academically rigorous courses introduce students to the latest concepts in management research and help them develop the skills they need not only to carry out their research projects but also to manage the ongoing technological, economic and social transformations, through a strong cooperation with the business world and the civil society.

Analyzing complex phenomena requires an important effort of collaboration among several scientific disciplines. The multidisciplinary approach, in fact, is certainly the richest and most fruitful in terms of real and substantial understanding of the changes that characterize the contemporary context. Disciplines most involved are business economics in all its articulations – management, organization, strategy, and marketing – law and solid foundations of economics and analytical and quantitative methods.

The Ph.D. Business for Society is structured in two curricula:

1. Management of institutions and international organization
2. Strategic management of innovation in companies and no-profit organizations

Please find below the details of the focus of the three scholarship:

Curriculum 1 - Management of institutions and International organization: project "Medium-long term macroeconomic modeling to analyze the energy and economic system interactions"

Curriculum 1 - Management of institutions and International organization, project "Evaluation of the strategic behavior of operators in the new paradigm of the electricity market"

Curriculum 2 - Strategic management of innovation in companies and no-profit organizations: project ESG metrics and impact investing"
